

Lanboss Preview

Oracle™ eBusiness Suite and Oracle Financials™ reports are difficult to print on laser printers whilst keeping them legible. Problems include reports exceeding page margins or columns losing their format, resulting in snaking across the page.

To answer these fundamental usage requirements, as well as provide a number of useful enhancements to the Oracle™ Financials reporting capabilities, Lanboss has created Lanboss Preview.

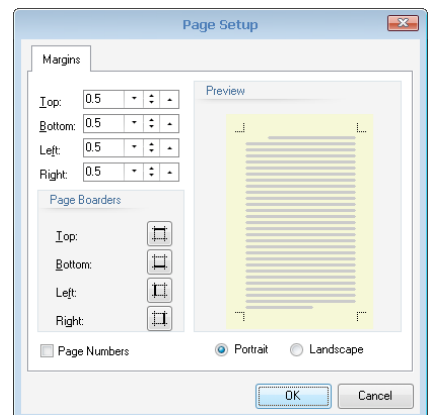

Preview is a simple-to-use application that allows reports to be printed on standard laser printers, without the need to edit or reformat the report to make it work. With Preview, the report no longer needs to be manipulated to make it fit the printer paper size using an editor or word processor. This enhances security, as it ensures that the output is not modified during formatting and is exactly what was produced by the system.

With Preview, columns are kept properly vertical, and no longer snake all over the place, as is the most common issue with proportional fonts. Oracle™ Financials printouts no longer requires users to have an expensive dot matrix or line printer

To round the product off, Lanboss has added PDF output to save paper and allow reports to be emailed to others or saved in a non-changeable file.

-
- ✓ Editing reports manually to fit the printer page is no longer needed
- ✓ Secure - the output is exactly what the system produced
- ✓ No Snaking, uses mono-spaced fonts so columns stay vertical
- ✓ Efficient, PDFs save paper and keep reports secure
- ✓ Save time - Automatically scales to fit the standard page size
- ✓ Uses standard printers, no 80/132 column printer needed
- ✓ Report History - Store previous reports for future comparisons
-

It automatically scales 80/132 column reports to the local printer's paper size.

The printer output can be changed to fit either portrait or landscape orientation, to make best use of the physical page and improve legibility.

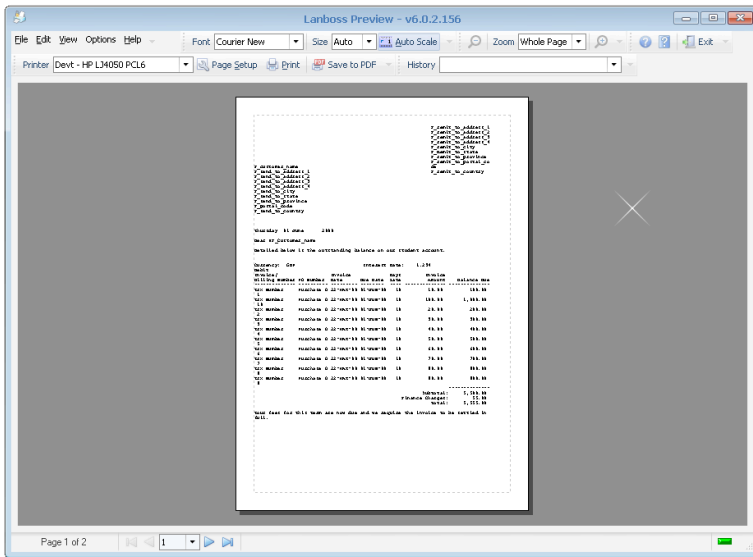

Technical Overview

Lanboss Preview works with any text file to be printed on a printer that uses proportional fonts, which includes most laser printers. Oracle™ Financials reports are files produced by the system for download (and opening) via Internet Explorer or another browser. Preview is associated within the workstation configuration with the specific file extension Oracle™ Financials is set to use. Whenever a user then opens a file with that extension, Preview will be launched automatically and load the file, ready for output.

Details of the product include:

- Mono Spaced Fonts - Uses standard mono spaced fonts to ensure columns are straight and allows a laser printer to simulate a 80/132 column line printer
- Automatic Font Scaling - Scales the text font size to match the printer page's width and height
- Zoom - the page can be viewed at virtually any Zoom level. With 'Whole Page' selected, the image will dynamically fill the main Preview dialog
- Printer Selection - Select and configure the printer to be used for printing to directly from the main dialog
- Page Borders - to cater for printouts that need to be punched and put in files, for easy legibility
- Document History - Quickly recall previous documents without running the reports again on the Oracle™ system
- PDF Output - Save the current document as an Adobe PDF file rather than printing.
